

Workday Introduces Workday Data Cloud to Unlock the Power of People and Money Data and Accelerate AI-Powered Innovation

Partnerships with Snowflake, Databricks, and Salesforce to Help Organisations Put HR and Finance Data to Work– Creating an Open and Connected Data Ecosystem

Workday Data Cloud Will Unify People and Money Data with Customer, Market, and Operational Data to Create a True Strategic Advantage

LONDON, September 16, 2025 – Workday Rising 2025 – [Workday, Inc.](#) (NASDAQ: WDAY), the enterprise AI platform for managing [people](#), [money](#), and [agents](#), today announced Workday Data Cloud, a new data layer that will help organisations unlock the strategic value of their HR and finance data by connecting it to their existing analytics platforms and operational systems. Customers will get rich, secure, real-time access to insights – turning workforce and financial information into action faster than ever.

Workday also announced that it is partnering with Snowflake, Databricks, and Salesforce to give customers direct, zero-copy access to their core HR and finance data within the platforms they already use and bring that customer and business data into Workday with the same zero-copy approach. This will eliminate the need for costly data exports, bulky reports, and stale duplicates – just clean, governed data at work.

For example, a retailer could combine Workday data on employee engagement with Snowflake data on store performance to help them understand which teams are driving the most sales. Or finance teams will be able to unify Workday’s financial data with market, risk, or sales data in Databricks to power real-time forecasting and scenario planning. Additionally, HR leaders will be able to enrich retention and performance insights from Workday with product sales data, sales team KPIs like sales quota attainment, or operational metrics like case resolution times from Salesforce – enabling real-time employee insight linked to business outcomes. This will help data teams build more accurate predictive models, automate insights across departments, and drive innovation – all using trusted, governed, and current data at the core.

“Too often, the most valuable data inside organisations is locked away – hard to access, slow to move, and costly to connect,” said Gerrit Kazmaier, president of product and technology, Workday. “With Workday Data Cloud and our zero-copy approach, customers will finally have simple, secure, and open access to their most trusted data – fueling a new generation of AI- powered innovation.”

Workday Data Cloud will provide a set of capabilities that enable organisations to securely connect and analyse HR and finance data in context with customer, market, and operational data. Together, these features will help ensure leaders have timely, governed insights to guide decision-making and accelerate AI innovation.

- **Workday Data Lake:** Will allow secure, easy access to a curated catalog of Workday business objects across Workday Human Capital Management (HCM), Workday Recruiting, Workday Payroll, Workday Learning, Workday Financial Management, Workday Spend Management, Workday Student, and more. This creates a single source of truth, reducing duplicated data and improving consistency across different applications. For example, customers will be able to streamline employee onboarding processes across HR, IT, and payroll, or sync financial data with project management data.
- **Workday Data Connect:** Will enable two-way, zero-copy data sharing between Workday and leading data platforms like Snowflake, Databricks, and Salesforce Data Cloud through a new Apache Iceberg connection. This will allow HR and finance data to be accessed in external platforms while bringing customer and market data into Workday, without duplication or complex integrations.
- **Workday Live Data Query:** Will provide direct SQL access to Workday’s core business data allowing customers to access the data they need in minutes, not months. This will accelerate advanced analytics, support AI model development, and enable faster business insights. For example, a finance professional will be able to get an up-to-the-minute view of budget vs. actual spend to accelerate the financial close process.
- **Workday Prism:** Will extend Workday’s data integration and transformation capabilities to support inbound zero-copy queries from external platforms. This will allow finance teams to enrich Workday financial data with market information in Snowflake’s AI Data Cloud or in Databricks, or HR teams to connect performance data with customer outcomes from Salesforce Data Cloud -- all while maintaining Workday’s governance and security standards.

Comments from Workday Data Cloud Partners

“The partnership between Snowflake and Workday is a major step forward in how companies can leverage their most valuable asset: their data,” said Christian Kleiner, executive vice president of product, Snowflake. “By eliminating the friction of data silos, we are making it possible for customers to accelerate their AI innovation and achieve a faster return on investment. This means business leaders can get the right insights, at the right time, to make smarter decisions and gain a competitive edge.”

“Customers consistently ask us for practical ways to realise the benefits of data and AI within their businesses. The core

challenge has always been managing, governing, and unifying their data effectively,” said Stephen Orban, senior vice president of product ecosystems and partnerships, Databricks. “By breaking down silos, this partnership enables customers to seamlessly enrich their data lakes with a trusted Workday data layer, unlocking new opportunities for innovation and smarter decision-making.”

“To thrive in the agentic era, businesses need a unified view of their operations,” said Narinder Singh, vice president, product management, Salesforce. “With Workday as part of our Zero Copy Partner Network, we are giving customers secure access to comprehensive HR, finance, CRM data on our connected platform – providing the highly relevant, rich context needed to drive smarter agents and better outcomes for employees and customers.”

Availability

Workday Data Cloud will be available to early adopter customers in the first half of 2026 and generally available later that year.
