

## Workday Learning, Powered by Sana, Now Generally Available as an AI-Native Learning Experience Built on Workday's Trusted Data

New Solution Combines Workday Learning and Sana Learn to Deliver Personalised AI Tutoring, Interactive Course Creation and Automated Learning Operations

**PLEASANTON, Calif., and LONDON, UK, July 22, 2026** – [Workday, Inc.](#) (NASDAQ: WDAY), the enterprise AI platform for HR, finance, and IT, today announced the general availability of [Workday Learning, powered by Sana](#). The solution combines Workday's trusted people and skills data with Sana's AI-native learning experience, so organisations can deliver personalised training grounded in the workforce data they already trust.

As organisations race to become AI-ready, many learning teams are still constrained by fragmented systems, manual workflows and generic courses that can't keep up with the pace of change. When training is generic and irrelevant, employees find ways to route around it, and completion rates say little about real capability. Organisations need learning that is personalised, dynamic and engaging enough that employees want to use it – while giving learning teams a faster way to create, update, translate and manage programmes.

Workday Learning, powered by Sana, brings AI into each part of the learning experience. Learners get a personal tutor that coaches them through complex material, breaks down difficult concepts into practical guidance and recommends what to learn next. Creators use AI to turn existing, static material into engaging, interactive learning experiences, while reducing the time it takes to create, update and translate courses for global audiences. Administrators get AI-powered automation for assignments, campaigns and other key learning tasks, helping Learning and Development (L&D) teams spend less time managing processes and more time shaping strategy and business impact.

"Checking the box isn't the same as building a skill," said Joel Hellermark, chief AI officer, Workday. "With a personal AI tutor, interactive quizzes, and learning tailored to each employee's role and skills, Workday Learning, powered by Sana, turns required training into engaging experiences employees can apply in their day-to-day work."

### Learning That Meets Employees Where They Work

With Workday Learning, powered by Sana, learning feels like a natural part of the workday rather than a separate task. Embedded in the learning experience, a personal AI tutor gives employees in-the-moment support tailored to their role, skills and goals. Employees can ask questions in natural language, get clear, actionable explanations tied to the material in front of them, practise new skills and receive feedback in the format that works best for them. The solution also recommends personalised learning paths that help employees build the skills they need for their current role and what comes next.

Smart search helps employees find specific answers instead of digging through long modules. A question like 'How do I handle a customer data request in Germany?' can surface a relevant lesson or policy explanation for that scenario, rather than requiring the learner to click through multiple generic compliance courses.

Because recommendations are informed by [Workday Human Capital Management \(HCM\)](#) data, including an employee's role, skills, organisation and location, employees see learning paths that reflect their actual context. For example, a manager who moves to a new region can be directed to relevant local policies and leadership resources, while an employee building skills for a new role can receive recommendations aligned to that role's requirements. Courses can also include interactive elements like quizzes, polls and reflection prompts to help employees check their understanding as they go, turning learning from a one-off event into an ongoing, adaptive experience.

### From Blank Page to Live Course in Hours, Not Weeks

For instructional designers, L&D teams and subject-matter experts, Workday Learning, powered by Sana, is built to remove the production bottlenecks that slow learning down. Instead of starting from a blank slide deck, teams can upload existing PDFs, presentations or other online course files and have them converted into structured, interactive courses in minutes.

The AI-powered editor helps teams transform static source material into engaging, interactive learning experiences. It proposes outlines, learning objectives, knowledge checks and interactive elements that authors can review and adjust. An integrated writing assistant helps handle everyday tasks like drafting lesson text, simplifying long policies into learner-friendly explanations, generating quiz questions and adapting content for different roles or regions.

Built-in translation capabilities allow teams to localise courses into dozens of languages from the same source, helping global organisations roll out programmes simultaneously across markets instead of in slow, sequential waves. Multiple contributors can work together in real time on the same course, simplifying reviews across learning, compliance and business stakeholders.

Organisations using these AI-powered authoring capabilities have reported reductions of up to 98% in content creation time for many learning programmes, moving from multi-week production cycles to hours and allowing teams to keep content aligned with fast-changing regulations, products and skills needs.

## **One Place to Run Learning Operations**

For learning administrators and HR teams, Workday Learning, powered by Sana, provides one place to manage assignments, campaigns, reporting and controls across both Workday-native and Sana-created content.

Learning paths update automatically when employees join, change roles or move regions, reducing the amount of time administrators spend on manual list building for compliance, onboarding and skills programmes.

Because learning data sits alongside HR data in Workday, leaders and administrators can track how programmes relate to outcomes like skills development, internal mobility, performance and retention – not just completion rates. A safety programme, for example, can be evaluated not only by completion rates but also in relation to incident data for specific regions.

Customers using these capabilities have seen learning operations move from reactive to proactive – with some reporting up to five times faster compliance reporting, three times higher learner engagement compared to legacy learning systems, and significant time savings for administrators and learning teams.

## **Customers Are Reshaping How Learning Gets Done**

“At The Josh Bersin Company, we shifted our learning business to an AI-first model using Sana, moving thousands of learners into an interactive, always-on environment and converting a large library of programmes into interactive courses in months rather than years,” said Josh Bersin, global industry analyst and CEO of The Josh Bersin Company. “Now integrated into Workday Learning, Sana gives companies an extraordinary opportunity to modernise large learning libraries into AI-fueled personal experiences and maintain enterprise governance standards.”

“At Accenture, reinvention is powered by continuous learning and the ability to build skills at speed and at scale,” said Colin Anderson, chief operating officer, HR at Accenture. “We’re evolving our learning ecosystem to be more intelligent, personalized, and aligned to the changing needs of our clients. Workday Learning, powered by Sana, is an important part of that journey and builds on top of the Accenture LearnVantage foundation—helping us deliver more adaptive, AI-enabled experiences that accelerate capability building across our workforce.”

## **Availability**

Workday Learning, powered by Sana, is now generally available globally as an integrated learning solution for Workday HCM customers. For organizations that do not use Workday HCM or Workday Financial Management, Sana Learn is available as a standalone offering. Existing guidance for Workday Learning will continue to apply in environments where Sana components cannot yet be used, including certain regulated and sovereign deployments.

## **Forward-Looking Statements**

This press release contains forward-looking statements including, among other things, statements regarding Workday’s plans, beliefs, and expectations. These forward-looking statements are based only on currently available information and our current beliefs, expectations, and assumptions. Because forward-looking statements relate to the future, they are subject to inherent risks, uncertainties, assumptions, and changes in circumstances that are difficult to predict and many of which are outside of our control. If the risks materialise, assumptions prove incorrect, or we experience unexpected changes in circumstances, actual results could differ materially from the results implied by these forward-looking statements, and therefore you should not rely on any forward-looking statements. Risks include, but are not limited to, risks described in our filings with the Securities and Exchange Commission (“SEC”), including our most recent report on Form 10-Q or Form 10-K and other reports that we have filed and will file with the SEC from time to time, which could cause actual results to vary from expectations. Workday assumes

no obligation to, and does not currently intend to, update any such forward-looking statements after the date of this release, except as required by law.

Any unreleased services, features, or functions referenced in this document, our website, or other press releases or public statements that are not currently generally available are subject to change at Workday's discretion and may not be delivered as planned or at all. Customers who purchase Workday services should make their purchase decisions based upon services, features, and functions that are currently available.
