

Workday Global CFO Survey: Finance Chiefs Shed Light on Data Gaps and Digital Priorities Post-Pandemic **Findings Highlight Plans to Accelerate Digitization, Prioritize ESG Over the Next One to Three Years**

PLEASANTON, Calif., July 28, 2021 (GLOBE NEWSWIRE) -- Workday, Inc. (NASDAQ: WDAY), a leader in enterprise cloud applications for [finance](#) and [human resources](#), today announced the results of its chief financial officer (CFO) [survey](#) exploring the impacts of COVID-19 on the finance function, CFOs' digital investment plans, and the role of data. The survey reveals that data management and analysis was the biggest area of concern for CFOs throughout the pandemic and the lack of data insights challenged organizations to make informed, fast decisions in the face of ongoing uncertainty.

In Mar. 2021, one year after many organizations were forced to remotely close the books for the first time due to stay-at-home orders for employees, Workday surveyed more than 260 global CFOs to better understand the challenges they faced during the pandemic. In addition, the study looked at how they are adapting their finance digital strategy to better prepare for future change.

The survey findings showed that only 19% of CFOs have automated nearly all their finance processes and are currently handling financial reporting digitally. With the majority of organizations in the midst of digital transformation, CFOs also reported gaps in their data, ultimately affecting performance over the past year. The lack of data to make critical business decisions impacted product launches, according to 28% of CFOs, with 24% citing missed financial forecasts, and 17% citing misaligned resource investments.

Additionally, key survey findings show:

- Execution during COVID-19 was significantly impacted due to lack of accurate data. Nearly half of CFOs (49%) say their organization's biggest gap over the past year was the ability to execute with accurate, timely data that drives quick, informed decisions.
- As a result, over the past year CFOs prioritized investments to close the data gap. When looking at investments, 50% of CFOs said they made the most progress over the past 12 months closing the data gap by prioritizing intelligent data foundations (creating a single source of truth for finance, worker, and operational data) and advanced analytics for better decision making.
- Looking ahead, CFOs are prioritizing cloud and machine learning investments over the next one to three years. Nearly two-thirds of CFOs (60%) are investing in reimagining finance operations in the cloud and deploying artificial intelligence and machine learning solutions to address finance digital transformation.
- Beyond technology investments, environmental, social, and corporate governance (ESG) as well as diversity and inclusion (D&I) are emerging as business priorities. ESG (29%) and D&I issues (26%) are listed as the emerging topics that businesses are most focused on prioritizing beyond technology — ranking higher than cybersecurity and cryptocurrency.

Comment on the News

"It's clear that a lack of insights during the pandemic resulted in missed opportunities for companies to drive top and bottom line growth across a variety of areas," said Barbara Larson, senior vice president, Accounting, Tax, and Treasury, Workday. "And the real gap CFOs identified was not just data — but timely, decision-ready data. With Workday, organizations can adopt a cloud-first intelligent data platform that brings financial, people, and operational information together in a single system. This not only fills the gaps but provides the foundation required to help deliver actionable insights and competitive advantage."
